Who we are

Since 1935, Amplivox has become a world-leading supplier of audiological and occupational health solutions to hearing and healthcare professionals around the world.

We understand the importance of having dependable and accurate hearing test equipment and solutions.

This ensures that screening and diagnostic programmes provide the best possible testing experience for both the user and the patient.

For everyone

Our approach

At Amplivox we strive to provide quality solutions to help clinicians, occupational health professionals, employers, and employees do their work safely and efficiently.

Working in partnership with Sanibel™, we offer a comprehensive range of approved and tested consumables, manufactured through a recognised and audited quality management system.

Our consumables and accessories are compatible for a range of hearing testing equipment and medical consulting room requirements (including test hygiene related consumables).

We will endeavour to source any materials not listed in this catalogue to fulfil your business needs.

Why use **single-use** ear tips?

Preventing ear Infections

Using disposable ear tips for single use is crucial to prevent the spread of ear infections between patients, a widely supported practice among audiologists. Employing a new ear tip for each patient significantly reduces the risk of cross-contamination.

Cerumen as an infectious agent

While cerumen may not typically be considered infectious, it is essential to treat it as such.

Visual detection of contaminants like blood or ear discharge can be challenging due to cerumen's colour and viscosity, making the use of disposable ear tips even more important, especially when testing children and individuals with weaker immune systems.

Cost of disposable ear tips

Our volume discounts often make disposable ear tips a more economical choice, particularly when considering the time and cost involved in cleaning reusable ear tips.

Cost effectiveness and hygiene

Investing in disposable ear tips can enhance clinic efficiency and patient safety. Using a new ear tip for each patient ensures a reliable fit, minimising testing time and stress for personnel.

The cost of disposable ear tips is outweighed by the benefits of improved hygiene and patient satisfaction.

6 reasons for new ear tips after each patient:

1. Reducing cross-contamination risk

It is challenging to ensure complete decontamination during ear tip cleaning, posing a risk between patients.

2. Minimising non-sealing

Ear tips degrade over time, hindering seal quality and leading to less accurate results.

3. Avoiding allergic reactions

Residue from cleaning agents may trigger allergic reactions in some patients.

4. Enhancing patient comfort

Patients feel safer and more comfortable knowing new ear tips are used.

5. Streamlining procedures

Using new ear tips saves staff time, allowing focus on essential tasks.

6. Improving efficiency

Fresh ear tips create a quicker and more reliable seal, reducing procedure time.

Selecting the correct ear tip

Selecting the correct size of ear tip takes practice

In general, flanged or mushroom-shaped ear tips will be used for most testing (Impedance, DPOAE, TEOAE and automated ABR). Sometimes, an umbrella-shaped ear tip will be used for performing a quick impedance screening. The table can be used as a guide to help you select the appropriate ear tip size.

Age	Inserted against ear canal	Inserted against entrance of ear canal			For Echo-Screen®		For AccuScreen®					
0.5 y/o			Green, pediatric				4.0 mm, ANA		3.7 mm, AOT

8515435	Pediatric OAE foam	Bag/20 pcs
8515438	Jumbo OAE foam	Bag/20 pcs

Save time, earn more money, and help more patients!

Use a new ear tip for each patient and ensure a proper seal immediately upon insertion. A new ear tip provides the best conditions for achieving a seal when inserting it into the patient's ear, whereas a reused one can often cause complications and delay the process.

By allocating less time per patient for testing, you can accommodate more patients per day. This is far more valuable than the time spent cleaning an ear tip, benefiting both your clinic and your patients.

Probe tips

IMP

Probe tip for Sanibel™ ADI™ ear tips

Fits all Otowaves, new MT10 and GSI Allegro.

Part no.	Unit
8002592	1 pc

Fits Corti™, ERO•SCAN™ Plus and the new OtoRead™.

Part no.	Unit
8513132	Bag/100 pcs + 1 pc

Sanibel™ probe tube removal tool

A = Probe

B = Probe Tube Installer

C = Attachment to probe cable

D = Tube Remover

To remove a probe tube

1. Place the front hole of the Probe Tube Tool over the end of the probe, as shown.
2. Squeeze the tool closed and hold it.
3. Twist the tool a couple of times while holding the tool closed and pulling away from the probe.
4. The probe tube will pull out from the probe. Discard the probe tube.

To install a new probe tube

5. Place a new tube into the hole on the top of the tool.
6. Align the probe with the tube.
7. Push the probe onto the probe tube until the probe contacts the face of the probe tube tool and a snapping sound is heard.
8. Slide the tool off, leaving the tube in place in the probe.

Choose the correct electrode for optimal performance

Sanibel Supply® offers various kinds of surface electrodes for ECG as well as EEG and ABR. Surface electrodes vary in size, adhesion, connectivity and frequency (test category).

The frequency plot to the above shows the electrical stimuli sent directly through the system and compared to the surface electrode (here ABR). The two lines are similar and demonstrate that the surface electrode can be used for ABR testing.

To place an order, contact Amplivox at hello@amplivox.com

Disposable electrodes

75 pcs

Vermed wetgel snap electrode

Pre-gelled hydrogel electrode with Ag/AgCl sensor. Very suitable for diagnostic follow-up. Used for newborn screening, industry-wide. Packaged 3 pcs. per pouch.

Part no.	Unit
8516221	Box/75 pcs

100 pcs

Vermed tab electrode

Rectangular tab electrode used for newborn screening, industry-wide. 12.7 x 22.9 mm. Conductive Adhesive Hydrogel. 10x10 pcs. per pouch.

Part no.	Unit
8516225	Bag/100 pcs

60 pcs

ABR

Vermed hydrogel snap electrode

Large soft electrode size making it very suitable for newborn screening and ABR measurements. Cloth material makes it convenient to wear. Size 3.4 x 2.2cm.

Part no.	Unit
8516907	Bag/60 pcs (3x20 pcs)

60 pcs

ABR

Vermed hydrogel snap electrode

Smaller than the rectangular version, but otherwise similar. Good, soft electrode size making it very suitable for newborn screening and ABR measurements. Cloth material makes it convenient to wear.

Part no.	Unit
8102022	Bag/60 pcs (3x20 pcs)

100 pcs

Vermed tab electrode

Rectangular tab electrode used for newborn screening, industry-wide. 22.9 x 34 mm. Conductive Adhesive Hydrogel. 10x10 pcs. per pouch.

Part no.	Unit
8516227	Bag/100 pcs

ABR

Ambu® Blue Sensor™ N-50-K

Part no.	Unit
8521842	Bag/25 pcs

50 pcs

Vermed economy line snap wet gel electrode

Non-woven cloth electrode with conductive wet gel. Passed ISO 10993 and is Latex free.

Sanibel probe tubes, type D
 Universal REM Probe Tubes

Part no.	Unit
8533304	50 pcs

Use Sanibel™ probe tubes for any equipment

We often hear from the industry that only manufacturers' specific probe tubes should be used with their equipment.

However, a recent study by Sanibel Supply® disproves this myth.

Audiologists and engineers compared the effects of various probe tubes on an Affinity2.0 system. They tested AudioScan (red), Otometrics (blue), and Sanibel™ (orange and grey) tubes.

After running each tube through the calibration process and comparing the resulting REUG curves, no significant differences were found.

All probe tubes yielded the same results when the calibration process was performed correctly.

The "REM effect"
 - better fitting & fewer follow-ups!

Reasons to maintain high-level skills in the art of ear impressions

The need to maintain the skills within ear impressions using quality products when working with patients is evident. Patients will be grateful for a high level of care and professionalism, long-term.

Science and art come together when making a good ear impression. A deep understanding and conscious choice of the types of materials used, combined with the professional desire to be precise and demonstrate great quality and accuracy in your work, will help you make great impressions for each and every one of your patients – regardless of their different ear canal anatomy.

There is a need to be skilled at ear impressions for several other reasons;

- 1 - The concept of "patient delight": One of the most frequent components of "delight" is you – the professional. Sanibel Supply agrees with all hearing professionals viewing the skill of impression taking as a critical one that impacts the potential to delight patients.
- 2 - Bad impressions result in bad earmolds or shells, resulting in bad fittings and dissatisfied patients.

- 3 - The opportunity to provide custom solutions for your patient in a non-custom world is one of the key benefits of being skilled and proficient at making ear impressions.
- 4 - The win-win of demonstrating your professionalism through the care and effort it takes to provide the best impression of anatomy, ear texture, and desired products.
- 5 - There are a lot of other options where we might need an impression, other than when fitting non-custom technology.

Fotoplast® lacquer 3

suitable for all hard earmolds. Curing time: 60seconds. Tissue-friendly surface sealing.

Tubing

Pre-bent tubing

Quilled on one end for easy insertion into the earpiece and double bent to lie close to the head.

Part no.	Description	Unit
8527852	Standard #12	Bag/25 pcs
8527872	Medium #13	Bag/25 pcs
8527853	Thick #13	Bag/25 pcs
8527854	Extra Thick #13	Bag/25 pcs

Pre-bent disappear tubing

With a long quill for easy insertion into earmold. The tubing is perfectly formed, free from kinking, in flesh colour. Please note, tubing color is not guaranteed. Colour of tubes may vary from pictures.

Part no.	Description	Unit
8527855	Standard #12	Bag/10 pcs
8527856	Medium #13	Bag/25 pcs
8527857	Thick #13	Bag/25 pcs

Tubing retention system (TRS)

Designed for all soft earpiece materials. Each TRS tube uses an acrylic ring to hold it in position in the earpiece. TRS tubes are easily replaced and will not tear silicone materials.

Part no.	Description	Unit
8527927	Thick #13	Bag/25 pcs
8527928	Super Thick #13	Bag/25 pcs

Pre-bent tubing, with tube lock

Tubing system that uses a brass retention ring for soft earpieces.

Part no.	Description	Unit
8527860	Thick #13	Bag/10 pcs
8527861	Super Thick #13	Bag/10 pcs

Pre-bent stay dry tubing

Specially formulated tube helps prevent moisture buildup caused by humidity or perspiration.

Part no.	Description	Unit
8527873	Medium #13	Bag/10 pcs
8527874	Thick #13	Bag/10 pcs

Tube lock, without tube

Brass tube-lock for use with 13 thick and 13 super thick tubing.

Part no.	Description	Unit
8527858	Thick #13	1 pc
8527859	Super Thick #13	1 pc

Horn tube

Uses the horn effect to increase response in the high-frequency range.

Part no.	Description	Unit
8527934	3 mm Medium	Bag/6 pcs
8527930	3 mm Thick	Bag/6 pcs
8527931	4 mm Medium	Bag/6 pcs

Horn TRS tubes

Horn TRS tubes use acrylic rings to hold tubes in position. Designed for soft earpiece materials.

Part no.	Description	Unit
8527932	3 mm	Bag/6 pcs
8527933	4 mm	Bag/6 pcs

Libby horn

Special tube designed to increase gain over conventional tubing. Ideal when using an analog hearing instrument and fitting a high frequency hearing loss. Also designed to allow for a friction fit into earmold without the need to damage soundbore when removing it.

Part no.	Description	Unit
8515663	4 mm	Bag/10 pcs
8515657	3 mm	Bag/10 pcs

Hearing aid fitting

5 main elements of a comprehensive HA fitting

1. Understanding the patient needs and history

A successful HA fitting entails an in-depth discussion of all the issues surrounding their hearing loss, these include: patient concerns, lifestyle and expectations. This needs to be done alongside a thorough medical history. It helps to set the scene.

2. Diagnostic audiometry and pre-fitting speech tests

Pure tone audiometry and word recognition testing are standard procedures performed using an Audiometer and the accuracy at

this point in the process is of great importance.

3. Fitting and verification

Three minimum goals specified for a HA fitting are:

- 1 - to make soft sounds audible,
- 2 - moderate sounds comfortable, and
- 3 - ensuring that loud sounds are not uncomfortable. You can get an objective view of the amplification in the ear using Real Ear Measurements, so you can fully understand what the hearing aid is doing for the patient.

4. Counseling and training

Patients should always receive thorough training and guidance in using their hearing aids as it will impact their success in using it as a rehabilitation tool.

5. Follow-up care and outcome measures

Post-fitting care is important to confirm if the user is utilizing their hearing aid to its greatest effect. Through discussion with their HCP, adjustments can be made if necessary, so that the user feels the best way possible about their hearing aids and are also given the opportunity to influence their hearing care.

Cerumen management accessories

Bionix® Safe ear curettes

Bionix® Safe Ear Curettes allow healthcare providers to safely and gently remove cerumen with styles to match different types of wax and personal preference. Bionix® Safe Ear Curettes are flexible, to reduce injury to the ear canal, making them safer than stainless steel curettes. Seven color coded tip styles to meet specific needs, giving you “the right tool for any job” for every cerumen situation. Also available as a variety pack.

Part no.	Description	Unit
8515585	Green MicroLoop®	50 pcs/box
8515586	Orange ControLoop®	50 pcs/box
8515587	Red AngleLoop®	50 pcs/box
8519359	Purple VersaLoop®	50 pcs/box
8519360	Blue InfantScoop®	50 pcs/box
8519372	Yellow CeraSpoon®	50 pcs/box
8519361	White FlexLoop®	50 pcs/box
8519362	Variety Kit, (10 each style & 15 white)	

Bionix® Lighted ear curettes

Bionix® Lighted ear curettes combine illumination and magnification to help healthcare providers take less time to see and safely remove cerumen from the ear canal. The Lighted Ear Curette with magnification brilliantly illuminates the ear canal, eliminating the practice of blindly curettaging the sensitive area. Complete visualization shortens procedure time and increases efficacy. Box of 50 pcs.

All versions include 1 Light Source and 1 magnifying lens.

Part no.	Description
8519364	Lighted AngleLoop®, 4mm diameter
8519365	Lighted MicroLoop®, 3mm diameter
8519366	Lighted WaveCurette™, 2.5mm wide tip
8519367	Lighted FlexLoop®, 4mm wide tip
8519368	Lighted CeraSpoon®, 4mm wide tip
8519369	Lighted InfantScoop®, 2mm wide tip
8519373	Lighted VersaLoop®, 3mm wide tip
8519370	Lighted CeraPik™, 2.5mm concave tip. Great for hard, impacted cerumen and foreign bodies.

Ear wax accumulation

When the ear’s self-cleaning process is disturbed, it leads to a buildup of cerumen, causing various ear-related issues like hearing problems. Factors like anatomical differences, infections, or skin conditions can narrow or block the ear canal, disrupting the natural removal of foreign particles from the ear.

Indications for treatment

Typically, ear wax is considered impacted and needing treatment when it blocks the view of the tympanic membrane and causes symptoms. Removal may also be necessary for diagnosis and hearing tests

Treatment options

Treatment options include cerumenolytics, like ear drops, often used first to help clear the wax. For more severe cases or ear canal problems, a doctor or ENT specialist may perform irrigation or manual removal under a microscope.

Lighted ear curette variety pack

Part no.	Description
8519363	With 1 light source and magnifying lens. Includes 8 pcs. of the Lighted Flexloop and 7 pcs. of each of the other styles (not including Cerapik).

Lighted forceps

Bionix Lighted Forceps combine illumination and magnification to help healthcare providers take less time to see and safely remove ear canal and nasal passage obstructions.

Part no.	Description
8519392	10 forceps, 1 light and 1 magnifying lens

OtoClear® spray wash kit

OtoClear Ear Irrigation system gently directs water to the ear canal wall with three divergent streams, instead of directly at the Tympanic Membrane.

Part no.	Description
8519371	Kit of 20x irrigator tips, 1x 470ml spray wash bottle, 1x ear basin
8519390	Otoclear Ear Basin, Box/3 pcs

Otoclear irrigation tips

Bionix OtoClear Ear Irrigation helps provide safe and comfortable ear irrigation without the backslash, at half the cost of a self-constructed device.

Part no.	Unit
8519375	Box/40 pcs

EarWay Pro - wax removal helix

Very easy and safe way to remove ear wax. The helix grabs around the ear wax lump and pulls it out in a comfortable way. Available in different languages, please contact us for details.

8515448	Replacement bulb	1 pc

Aidapter for hearing aid fitting

Clear Silicone Acoustics couplers. A unique silicone piece that clicks onto the HA-1 adapter.

You can use the Aidapter with receiver-in-canal (RIC) and thin tube hearing aids.

The Aidapter™ provides a good acoustic seal and standardizes the coupling and eliminates the hassle and hygienic issues of using acoustic putty.

Part no.	Description	Unit
8525568	Interacoustics	Bag/3pcs
8525578	MedRx	Bag/3pcs
